

## DQB1 rabbit pAb

Catalog No	BYab-11342
Isotype	IgG
Reactivity	Human;Rat;Mouse;
Applications	WB
Gene Name	HLA-DQB1 HLA-DQB
Protein Name	DQB1
Immunogen	Synthesized peptide derived from human DQB1 AA range: 54-104
Specificity	This antibody detects endogenous levels of DQB1 at Human
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen.
Dilution	WB 1: 500-2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	
Observed Band	
Cell Pathway	Cell membrane; Single-pass type I membrane protein. Endoplasmic reticulum membrane; Single-pass type I membrane protein. Golgi apparatus, trans-Golgi network membrane; Single-pass type I membrane protein. Endosome membrane; Single-pass type I membrane protein. Lysosome membrane; Single-pass type I membrane protein. The MHC class II complex transits through a number of intracellular compartments in the endocytic pathway until it reaches the cell membrane for antigen presentation.

is a heterodimer consisting of an alpha (DQA) and a beta chain (DQB), both
anchored in the membrane. It plays a central role in the immune system by
presenting peptides derived from extracellular proteins. Class II molecules are
expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells,
macrophages). The beta chain is approximately 26-28 kDa and it contains six
exons. Exon 1 encodes the leader peptide, exons 2 and 3 encode the two
extracellular domains, exon 4 encodes the transmembrane domain and exon 5
encodes the cytoplasmic tail. Within the DQ molecule both the alpha chain and
the beta chain contain the polymorphisms specifying the peptide binding
specificities, resulting in up to four different molecules. Typing for these
polymorphisms is routinely done for bone marro
