

## Tubulin α (Acetyl Lys112) Polyclonal Antibody

| Catalog No         | BYab-02904   |
|--------------------|--|
| Isotype            | IgG  |
| Reactivity         | Human;Mouse;Rat  |
| Applications       | WB;ELISA   |
| Gene Name          | TUBA1A/TUBA1B/TUBA1C   |
| Protein Name       | Tubulin alpha-1A chain/Tubulin alpha-1B chain/Tubulin alpha-1C chain   |
| Immunogen          | Synthesized acetyl-peptide derived from human Tubulin $ \alpha $ around the acetylation site of K112.  |
| Specificity        | Acetyl-Tubulin $\alpha$ (K112) Polyclonal Antibody detects endogenous levels of Tubulin $\alpha$ protein only when acetylated at K112.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.  |
| Source             | Polyclonal, Rabbit,IgG   |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.  |
| Dilution           | Western Blot: 1/500 - 1/2000. ELISA: 1/20000. Not yet tested in other applications.  |
| Concentration      | 1 mg/ml  |
| Purity             | ≥90%   |
| Storage Stability  | -20°C/1 year   |
| Synonyms           | TUBA1A; TUBA3; Tubulin alpha-1A chain; Alpha-tubulin 3; Tubulin B-alpha-1;<br>Tubulin alpha-3 chain; TUBA1B; Tubulin alpha-1B chain; Alpha-tubulin<br>ubiquitousTubulin K-alpha-1; Tubulin alpha-ubiquitous chain; TUBA1C; TUBA6;<br>Tubulin alpha-1C chain; Alpha-tubulin 6; Tubulin alpha-6 chain  |
| Observed Band      | 50kD   |
| Cell Pathway       | Cytoplasm, cytoskeleton.   |
| Tissue Specificity | Expressed at a high level in fetal brain.  |
| Function           | disease:Defects in TUBA1A are the cause of lissencephaly type 3 (LIS3)<br>[MIM:611603]. LIS is characterized by a smooth brain surface due to the absence<br>(agyria) or reduction (pachygyria) of surface convolutions. It is often associated<br>with psychomotor retardation and seizures. LIS3 features include agyria or<br>pachygyria or laminar heterotopia, severe mental retardation, motor delay,<br>variable presence of seizures, and abnormalities of corpus callosum,<br>hippocampus, cerebellar vermis and brainstem.,function:Tubulin is the major |

|----------------------------|---|
|                            | constituent of microtubules. It binds two moles of GTP, one at an exchangeable<br>site on the beta chain and one at a non-exchangeable site on the<br>alpha-chain.,PTM:Undergoes a tyrosination/detyrosination cycle, the cyclic<br>removal and re-addition of a C-terminal tyrosine residue by the enzymes tubulin<br>tyrosine carboxypeptidase (TTCP) and tubulin tyrosine ligase (TTL), resp   |
| Background                 | Microtubules of the eukaryotic cytoskeleton perform essential and diverse<br>functions and are composed of a heterodimer of alpha and beta tubulins. The<br>genes encoding these microtubule constituents belong to the tubulin superfamily,<br>which is composed of six distinct families. Genes from the alpha, beta and gamma<br>tubulin families are found in all eukaryotes. The alpha and beta tubulins represent<br>the major components of microtubules, while gamma tubulin plays a critical role in<br>the nucleation of microtubule assembly. There are multiple alpha and beta tubulin<br>genes, which are highly conserved among species. This gene encodes alpha<br>tubulin and is highly similar to the mouse and rat Tuba1 genes. Northern blotting<br>studies have shown that the gene expression is predominantly found in<br>morphologically differentiated neurologic cells. This gene is one of three<br>alpha-tubulin genes in a cluster on chromosome 12q. |
| matters needing attention  | Avoid repeated freezing and thawing!  |
| Usage suggestions          | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |
