Background The cytoplasmic peripheral membrane protein encoded by this general protein-tyrosine kinase substrate in microvilli. As a member of the B family, this protein serves as an intermediate between the plasma methe actin cytoskeleton. This protein plays a key role in cell surface stradhesion, migration and organization, and it has been implicated in whuman cancers. A pseudogene located on chromosome 3 has been this gene. Alternatively spliced variants have also been described for [provided by RefSeq, Jul 2008],	ERM protein embrane and ructure various identified for
