

## SIRP-α1 Polyclonal Antibody

| Catalog No         | BYab-04211  |  |  |  |
|--------------------|---|--|--|--|
| Isotype            | IgG   |  |  |  |
| Reactivity         | Human;Mouse;Rat   |  |  |  |
| Applications       | WB;IHC;IF;ELISA   |  |  |  |
| Gene Name          | SIRPA   |  |  |  |
| Protein Name       | Tyrosine-protein phosphatase non-receptor type substrate 1  |  |  |  |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human Sirp alpha1. AA range:451-500   |  |  |  |
| Specificity        | SIRP-α1 Polyclonal Antibody detects endogenous levels of SIRP-α1 protein.   |  |  |  |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |  |  |  |
| Source             | Polyclonal, Rabbit,IgG  |  |  |  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |  |  |  |
| Dilution           | WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/20000 IF 1:50-200  |  |  |  |
| Concentration      | 1 mg/ml   |  |  |  |
| Purity             | ≥90%  |  |  |  |
| Storage Stability  | -20°C/1 year  |  |  |  |
| Synonyms           | SIRPA; BIT; MFR; MYD1; PTPNS1; SHPS1; SIRP; Tyrosine-protein phosphatase<br>non-receptor type substrate 1; SHP substrate 1; SHPS-1; Brain Ig-like molecule<br>with tyrosine-based activation motifs; Bit; CD172 antigen-like family member A;<br>Inhibito   |  |  |  |
| Observed Band      | 55kD  |  |  |  |
| Cell Pathway       | Membrane; Single-pass type I membrane protein.  |  |  |  |
| Tissue Specificity | Ubiquitous. Highly expressed in brain. Detected on myeloid cells, but not T-cells.<br>Detected at lower levels in heart, placenta, lung, testis, ovary, colon, liver, small<br>intestine, prostate, spleen, kidney, skeletal muscle and pancreas.   |  |  |  |
| Function           | function:Immunoglobulin-like cell surface receptor for CD47. Acts as docking<br>protein and induces translocation of PTPN6, PTPN11 and other binding partners<br>from the cytosol to the plasma membrane. Supports adhesion of cerebellar<br>neurons, neurite outgrowth and glial cell attachment. May play a key role in<br>intracellular signaling during synaptogenesis and in synaptic function (By<br>similarity). Involved in the negative regulation of receptor tyrosine kinase-coupled |  |  |  |

|                            | cellular responses induced by cell adhesion, growth factors or insulin. Mediates<br>negative regulation of phagocytosis, mast cell activation and dendritic cell<br>activation. CD47 binding prevents maturation of immature dendritic cells and<br>inhibits cytokine production by mature dendritic<br>cells.,PTM:N-glycosylated.,PTM:Phosphorylated on tyrosine residues in response<br>to stimulation with EGF, growth hormone, insulin and PDGF. Dephosphoryla   |
| Background                 | The protein encoded by this gene is a member of the signal-regulatory-protein (SIRP) family, and also belongs to the immunoglobulin superfamily. SIRP family members are receptor-type transmembrane glycoproteins known to be involved in the negative regulation of receptor tyrosine kinase-coupled signaling processes. This protein can be phosphorylated by tyrosine kinases. The phospho-tyrosine residues of this PTP have been shown to recruit SH2 domain containing tyrosine phosphatases (PTP), and serve as substrates of PTPs. This protein was found to participate in signal transduction mediated by various growth factor receptors. CD47 has been demonstrated to be a ligand for this receptor protein. This gene and its product share very high similarity with several other members of the SIRP family. These related genes are located in close proximity to each other on chromosome 20p13. Multiple alternati |
| matters needing attention  | Avoid repeated freezing and thawing!   |
| Usage suggestions          | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.  |
